

Sage HRMS Active Directory Conduit by Delphia Consulting

Sage HRMS Active Directory Conduit by Delphia Consulting, a Sage Endorsed Solution, alleviates duplicate data entry between Sage HRMS and updates made to the Active Directory by the IT staff. Employee data is often duplicated in multiple systems, an HR system, and Microsoft® Active Directory repository. Sage HRMS Active Directory Conduit updates required redundant entry efforts for the human resources and information technology departments.

Sage HRMS Active Directory Conduit synchronizes Active Directory with data from Sage HRMS. This keeps Active Directory up to date and accurate while eliminating manual notification of changes and data entry.

Benefits

- **Synchronizes Active Directory with data from Sage HRMS**
Automatically update Active Directory with changes to employee data in Sage HRMS, keeping Active Directory and the applications that depend on it, such as Outlook® Address Book, up to date and accurate.
- **Streamlines the termination process**
No need to remember to deactivate accounts. Sage HRMS Active Directory Conduit deactivates terminated employee accounts automatically, enabling timely security of your system and processes.
- **Eliminates duplicate disconnected data repositories**
Sage HRMS Active Directory Conduit lets you maintain official employee records in Sage HRMS and push that data to Active Directory so you don't have two disconnected repositories of the same data, ensuring the integrity of your data.
- **Increases efficiency**
Sage HRMS Active Directory Conduit runs as a scheduled service, eliminating the need for IT staff to manually enter changes into Active Directory, allowing them more time to focus on their core activities.
- **Easy setup**
An XML file maps the fields from Sage HRMS to Active Directory. Once the desired mapping is configured, a scheduled service routinely syncs Active Directory against Sage HRMS. Sample configuration files are provided to make setup hassle free.
